#### **FACT SHEET**

# Feet and Footwear for Older Adults

# Footcare and safe shoes to prevent falls

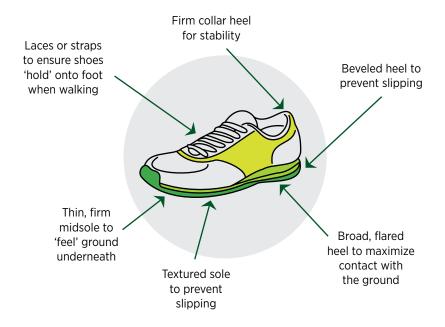

Falls are the leading cause of injury for older adults (ages 65 and older) and can have serious consequences, like limited mobility and loss of independence. Routine care for feet and proper supportive footwear can reduce your risk of falls.

#### What foot problems are associated with falls?

Foot related risk factors that increase fall risk:

- Increased foot pain
- Reduced flexibility in ankle joint
- Reduced calf muscle strength (the muscle that helps you rise on the balls of your feet)
- Reduced sensation resulting from neuropathy (nerve damage)
- Presence of a bunion (hallux valgus deformity) or toe deformities

#### What makes a shoe safe?

# **Footwear Tips**

#### **Health Tips**

- Your healthcare provider or podiatrist can check your feet and determine if there are issues that increase your risk of falling. Podiatrists diagnose and treat foot conditions.
- Ask your healthcare provider to check your feet once a year.
- See a podiatrist if you have foot problems, such as toe or foot deformities or foot pain.
- Work with a physical therapist to learn exercises to increase strength and flexibility of foot and ankle.

#### **Safety Tips**

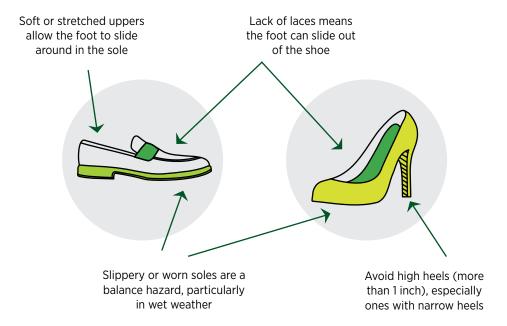

- Always wear properly fitted shoes inside and outside your home.
- Wear sturdy shoes with cushioning, low heels, traction, and strong arch and heel support.

Working with your healthcare provider or podiatrist to address foot problems and using supportive footwear can reduce your risk of falling.

#### What makes a shoe unsafe?

# **Examples of appropriate shoes to reduce** risk of falls

# **Footwear Tips**

#### **Safety Tips**

- Avoid walking barefoot or only wearing socks inside and outside your home.
- Avoid wearing shoes with heels over one inch, with no ankle support, or with a smooth sole.
- Avoid wearing shoes with no back (such as a mule or clog) or strappy back (such as a slingback).

#### **Footwear Tips**

- When shopping for shoes, trying them on later in the day can help ensure a proper fit.
- Have your feet measured to ensure appropriate shoe width and length.
- Accommodate foot deformities such as bunions or hammertoes by choosing shoes with a wide toe box.
- Consider a pedorthist, a specialist in footwear and devices, for footwear and orthotic recommendations to provide the best possible support for walking. See www.pedorthics.org for a searchable directory of credentialed pedorthists.
